

F10. Running example: bridge-dependent evidence chain

Every arrow carries a bridge relation; remove a middle relation and the answer is not identifiable.

Question: Which scientist discovered the chemical element named after the country where the author of Cien años de soledad was born?

surface-visible from original query

bridge-dependent after intermediate resolution

later evidence becomes queryable only after the bridge is resolved

Observable trace

This example visualizes the latent chain C* versus the retrieved pool, selected context, and answer-bearing evidence.
